

Podłączenie impulsów prędkości w Polaris RZR 2008  
(w 2010 powinno być identycznie)

Zaleca się podłączyć sygnał prędkości przy prędkościomierzu – 3 pinowa wtyczka (opisana na poniższym schemacie jako „SPEEDOMETER #2”), przewód środkowy, kolor przewodu biały.

Zasilanie urządzenia należy podłączyć za heblem (jeśli występuje; wyłączenie hebla musi wyłączyć urządzenie), dodatkowo zasilanie zabezpieczyć bezpiecznikiem 5A lub 7.5A

Po montażu należy skalibrować urządzenie!

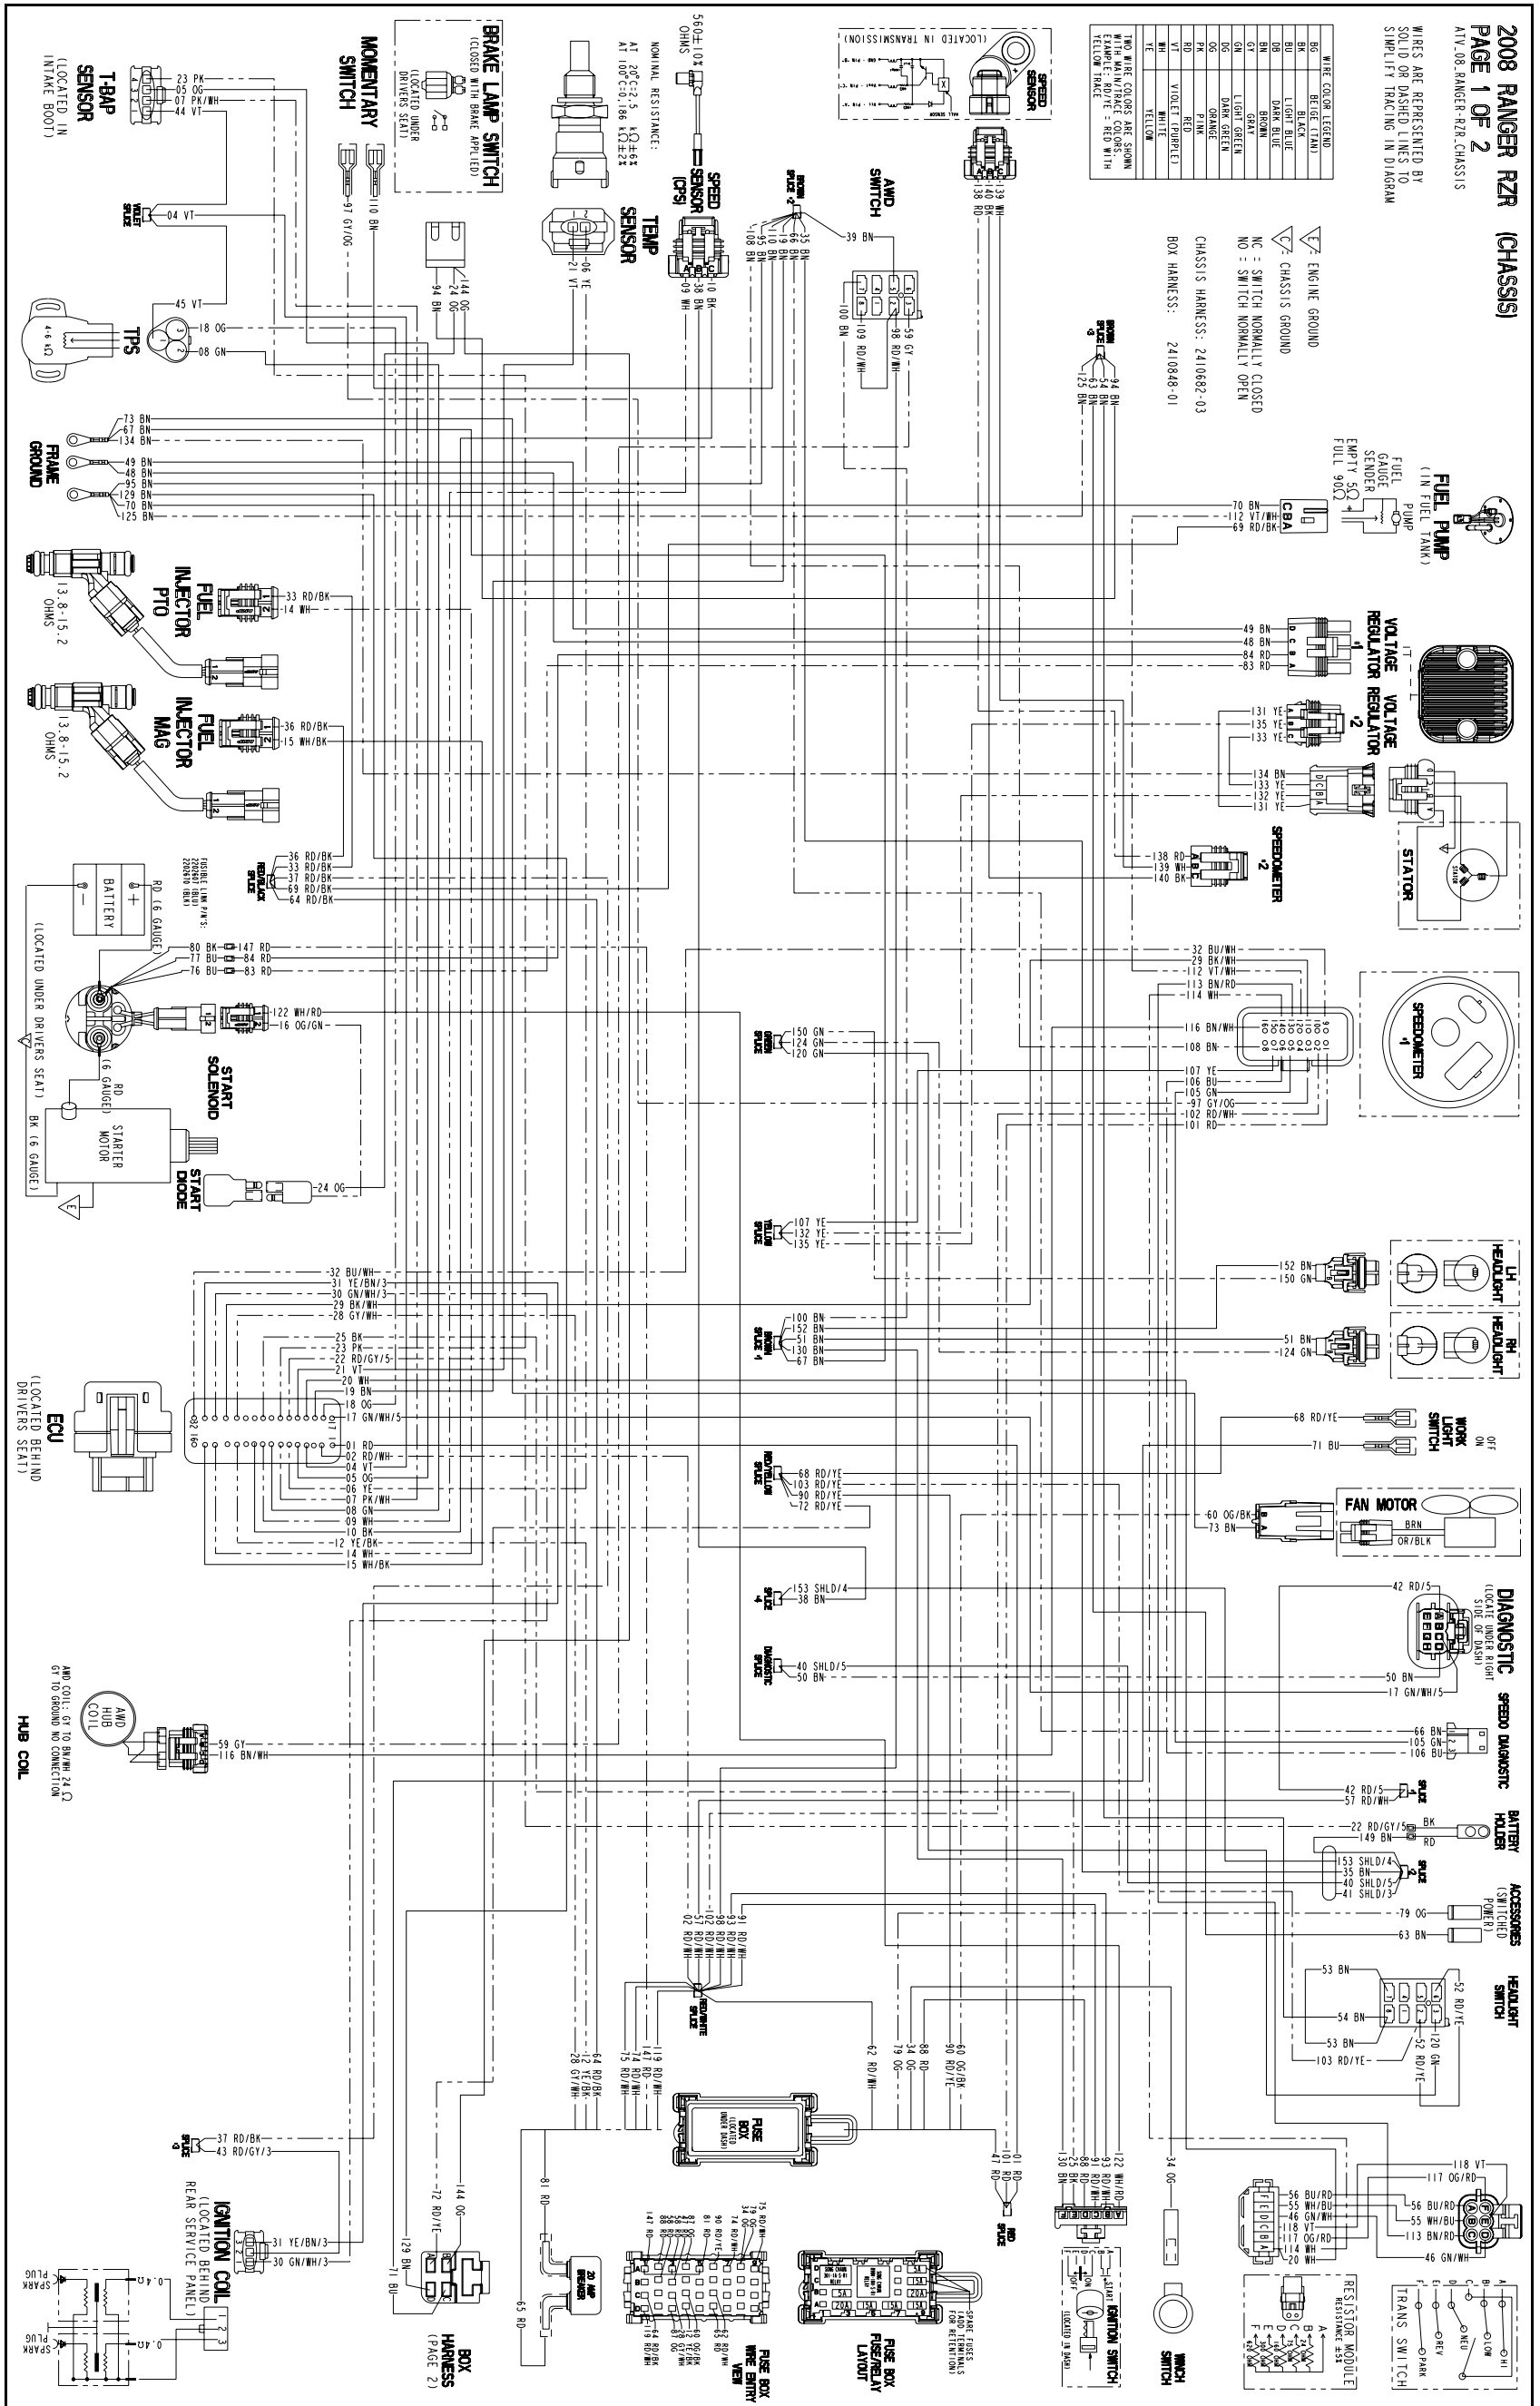

Speed signal connection for Polaris RZR 2008  
(2010 should be the same)

It is recommended to connect a speed signal close to the speedometer unit. There is a 3-pin connector (described on following wire diagram as “SPEEDOMETER #2”), speed signal is on centre wire (white colour).

Power supply for tripmaster should be connected after master circuit breaker (if exists; switching master circuit breaker off must turn tripmaster off). Protect power supply using 5A or 7.5A fuse.

You should calibrate the tripmaster after installation!
